

I live in rural Tenn. and do NOT have access to radio station giving the traffic and weather in other areas of the state or the country for that matter.

My feeling is that if I pay for a service that was given the right to offer this service to the public, then the Gov't. should not now come in and decide to regulate of all things weather and traffic in other parts of the country. This traffic info ISN'T even available on TV. I am totally against restricting, ending, or governing XM Satalite Radio, with regards to the programs they offer on Weather and Traffic.
